LIFTRITE LEC 1000M ELECTRIC HAND PALLET TRUCK

Features

The LEC 1000M is a flexible, reliable and easily manoeuvred electrically powered hand pallet truck. It has all the desirable features of a conventional hand pallet truck but is self-propelled. The power source is an electric motor which is activated and deactivated via two pushbuttons on the tow-bar. The motor allows the operator to concentrate on precision steering instead of towing. The compact design makes it possible to simply and safely manoeuvre the truck even in cramped quarters. The LEC 1000M is the ideal transport medium for supermarkets, hospital corridors or distribution warehouses.

Bushings, grease bushings and ground axles for high performance in the long term.

Simple and logical pushbutton control.

Press and hold the forward pushbutton to launch the vehicle and attain a smooth acceleration to a restrained speed of around 3.5 km/h. Press twice to attain the maximum speed of 5.0 km/h, a normal walking pace. For smooth and safe braking, release the active directional pushbutton, then press and hold the other button until the truck comes to a complete stop.

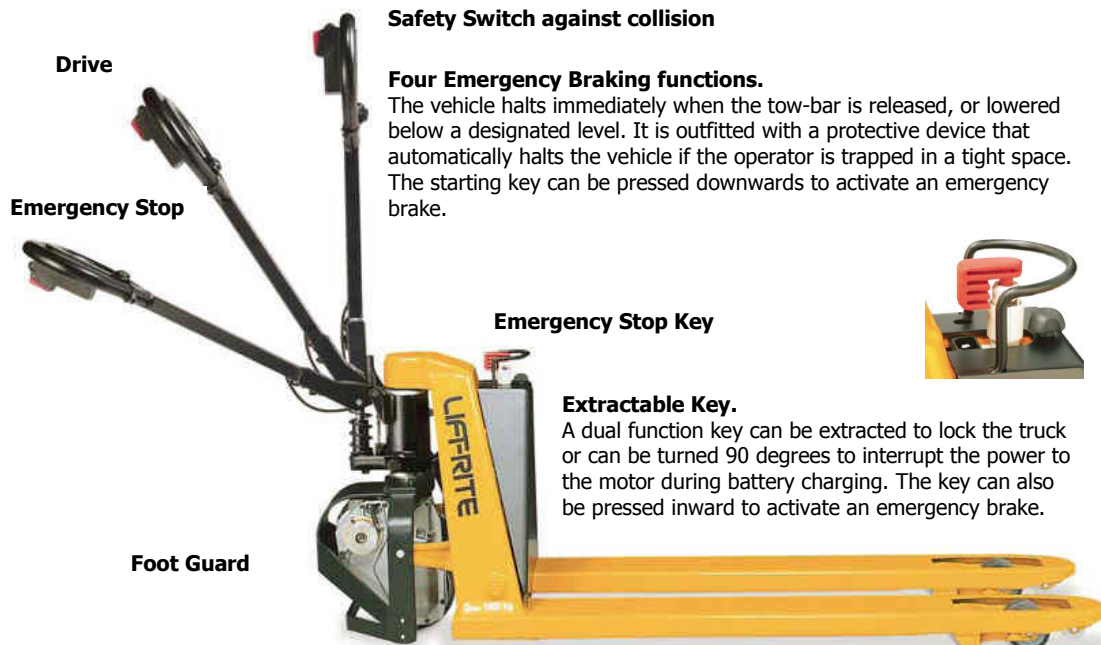

Rugged, robust pump for high reliability.

Fork wheel alternatives.

The LEC 1000 M can be equipped with fork wheels adapted to any specific loading need and working environment.

- Nylon
- Polyurethane
